

HOW TO USE RENUSURFACE CONCENTRATE

HOW TO MIX RENUSURFACE CONCENTRATE

1:1 Exterior Surfaces
(Bugs, Bumpers, Wheels, etc.)
Mix 1 Part Water with 1 Part ReNuSurface Concentrate.

Best Practice: Use a garden sprayer or bucket along with a hard bristle brush to apply and remove bugs from bumpers.

4:1 Interior Surfaces
(Windows, Vinyl, Fabric, etc.)
Mix 4 Parts Water with 1 Part ReNuSurface Concentrate.

Best Practice: When cleaning windows and glass, use the “box method” with a clean micro-fiber or paper towel to get a streak-free shine, everytime!

HOW TO OPEN A 5-GALLON CARBOY

- **Option 1:** Using a cordless drill with a 3/4" spade, paddle or hole saw bit, drill out the Carboy opening. It is okay if the inner piece of plastic falls into the Carboy. Screw the faucet spout clockwise into the carboy opening.
- **Option 2:** Using a blunt 3/4" socket extender, hammer the socket extender into the Carboy opening until the inner section gives way. Be careful not to drop the socket extender you are using into the Carboy. Again, it is okay if the inner plastic piece falls into the Carboy. Screw the faucet spout clockwise into the carboy opening.

Best Practice: Use a ReNuSurface Proportioner with our 5 and 55-Gallon Containers of ReNuSurface Concentrate to always ensure a proper 4:1 mixing ratio.

HOW TO INSTALL THE RENUSURFACE PROPORTIONER

The ReNuSurface Proportioner is easy to install, ensures a 4:1 mixing ratio, and our Proportioner Kit includes everything you need to get up and running quickly.

For detailed video instructions on how to install the ReNuSurface Proportioner, scan the code with your mobile device or visit:
